

Christine Adelusi

SENIOR DEVOPS / PLATFORM ENGINEER

christineadelusi@gmail.com | linkedin.com/in/christine-adelusi-31b64512b | github.com/xtinead

PROFESSIONAL SUMMARY

Senior DevOps / Platform Engineer with hands-on experience designing, building, and operating AWS-native platforms. Expertise in Terraform infrastructure as code, Jenkins CI/CD, Amazon ECS and EKS, Kubernetes GitOps with Argo CD, immutable AMI automation, observability, and disaster recovery. Brings a platform ownership mindset focused on secure delivery, reliability, scalability, and repeatable operations.

TECHNICAL SKILLS

Cloud and Platforms: AWS: VPC, EKS, ECS, EC2, Auto Scaling, ALB, ECR, EFS, RDS, IAM, CloudWatch, ACM

Infrastructure as Code: Terraform, Packer, Ansible

CI CD and GitOps: Jenkins, GitHub, Argo CD

Containers and Observability: Docker, Kubernetes, Helm, Prometheus, Grafana, HPA

Scripting: Bash, Python, SQL

SELECTED ARCHITECTURE HIGHLIGHTS

- Designed highly available AWS container platforms using ECS on EC2 and EKS, Auto Scaling, Application Load Balancers, EFS, and RDS.
- Built hardened, reusable ECS-optimized AMIs with Packer, Ansible, and Jenkins to standardize hosts and reduce configuration drift.
- Implemented modular, multi-environment Terraform architectures with isolated S3 and DynamoDB state for networking, compute, storage, IAM, and observability.
- Established pull-based GitOps delivery with Argo CD, declarative Kubernetes manifests, controlled rollouts, and rollback through Git history.

PROFESSIONAL EXPERIENCE

Kapstack | Senior DevOps / Platform Engineer | 2022 - Present

- Designed a layered AWS platform separating Terraform bootstrap, infrastructure, and GitOps delivery to reduce blast radius and improve recovery.
- Built EKS infrastructure with Terraform, including VPCs, private subnets, IAM OIDC integration, RDS, EFS, and workload security boundaries.
- Implemented Argo CD delivery that reconciles declarative Kubernetes state while keeping direct production kubectl access out of Jenkins.
- Orchestrated environment-isolated Terraform workflows through Jenkins with AWS role assumption, approval controls, drift checks, and destroy safety gates.
- Created documented teardown, rebuild, backup, and recovery workflows for repeatable platform reconstruction without orphaned resources.
- Diagnosed Terraform state drift and lifecycle conflicts, and authored architecture diagrams, ADRs, runbooks, and onboarding documentation.

Stack IT Solutions | DevOps Engineer | 2018 - 2022

- Designed and deployed an AWS ECS platform on EC2 with Terraform, including VPCs, subnets, ALB, Auto Scaling Groups, EFS, IAM, and CloudWatch logging.
- Built Jenkins pipelines that automated Packer AMI creation, Terraform provisioning, Docker image publishing to ECR, and ECS service deployment.
- Automated application delivery with Docker, ECS, EFS, and RDS using environment-specific configuration and reusable infrastructure modules.
- Managed Terraform state, imports, and refactoring; resolved IAM assume-role, ECS instance-registration, and pipeline execution failures.
- Implemented operational visibility with CloudWatch metrics, logs, alerts, and Grafana dashboards.

EDUCATION

Bachelor of Arts in Health Care Administration and Policy

PROFESSIONAL DEVELOPMENT

In progress: AWS Certified DevOps Engineer - Professional; HashiCorp Certified Terraform Associate; Jenkins Engineer Certification
