Christine Adelusi

SENIOR DEVOPS / PLATFORM ENGINEER

christineadelusi@gmail.com | linkedin.com/in/christine-adelusi-31b64512b | github.com/xtinead
Portfolio: xtinead.github.io/christine-devops-portfolio/

PROFESSIONAL SUMMARY

Senior DevOps / Platform Engineer experienced in designing and operating AWS-native platforms using Terraform, EKS, ECS, Jenkins, and Argo CD. Architected a lifecycle-aware platform with seven independently managed Terraform roots, separating persistent shared services from replaceable runtime infrastructure. Focused on least-privilege access, controlled GitOps delivery, infrastructure recovery, observability, and repeatable operations.

TECHNICAL SKILLS

AWS & Networking: VPC, Route 53, private subnets, IAM, EKS, ECS, EC2, ALB, Auto Scaling, ECR, EFS, RDS, S3, CloudWatch, ACM

Infrastructure & Automation: Terraform, Packer, Ansible, Jenkins, Bash, Python

CI/CD & GitOps: Jenkins, GitHub, Argo CD, declarative Kubernetes manifests, Helm

Containers & Reliability: Docker, Kubernetes, HPA, Prometheus, Grafana, monitoring and recovery workflows

Additional: SQL, architecture decision records (ADRs), runbooks, infrastructure troubleshooting

SELECTED ARCHITECTURE HIGHLIGHTS

- Designed a lifecycle-aware AWS platform with seven Terraform roots: bootstrap, dns-bootstrap, dns-account, artifact-registry, platform-infra, data-protection, and platform-gitops.
- Separated foundational administrative resources, protected shared services, and environment-specific replaceable infrastructure to reduce change blast radius and improve recovery planning.
- Established pull-based GitOps with Argo CD, keeping Kubernetes desired state in Git and direct production kubectl access out of Jenkins delivery workflows.
- Built AWS ECS and EKS architectures using private networking, IAM boundaries, RDS, EFS, load balancing, and autoscaling; automated reusable AMI builds with Packer and Jenkins.

PROFESSIONAL EXPERIENCE

Kapstack | Senior DevOps / Platform Engineer | 2022 – Present

- Architected a lifecycle-aware AWS platform using seven independently managed Terraform roots, separating workload identity, DNS, artifact registries, runtime infrastructure, data protection, and GitOps control planes to enforce lifecycle boundaries, reduce blast radius, and support controlled recovery.
- Designed EKS infrastructure with Terraform, including VPCs, private subnets, IAM OIDC integration, RDS, EFS, and workload security boundaries.

- Established distinct lifecycle controls for shared protected resources versus environment-specific, replaceable runtime components; documented recovery and teardown procedures.
- Implemented Argo CD reconciliation of version-controlled Kubernetes workloads while keeping direct production kubectl access out of Jenkins.
- Automated Terraform workflows in Jenkins using AWS role assumption, approval controls, drift checks, and safeguards for destructive operations.
- Troubleshot Terraform drift and lifecycle conflicts; developed architecture diagrams, ADRs, runbooks, and onboarding documentation.

Stack IT Solutions | DevOps Engineer | 2018 – 2022

- Designed and deployed AWS ECS on EC2 using Terraform, VPCs, subnets, ALB, Auto Scaling Groups, EFS, IAM, and CloudWatch logging.
- Built Jenkins pipelines for Packer AMI creation, Terraform provisioning, Docker image publishing to ECR, and ECS service deployment.
- Automated application delivery with Docker, ECS, EFS, and RDS using environment-specific configurations and reusable Terraform modules.
- Managed Terraform state, imports, and refactoring; resolved IAM assume-role, ECS instance-registration, and Jenkins pipeline failures.
- Implemented operational visibility through CloudWatch metrics, logs, alerts, and Grafana dashboards to support troubleshooting and service health.
- Built reusable ECS-optimized AMIs with Packer, Ansible, and Jenkins to standardize host configuration and reduce configuration drift.

EDUCATION

Bachelor of Arts in Health Care Administration and Policy

PROFESSIONAL DEVELOPMENT

In progress: AWS Certified DevOps Engineer – Professional; HashiCorp Certified Terraform Associate; Jenkins Engineer Certification
